

The TOP Server will work with Windows Terminal Services (MSTS - Remote Desktop is a form of this). The TOP Server will install as a [System Service](#) which can be accessed through the configuration user interface and the [offline editing](#) feature. Using the [offline editing](#) ability you can modify a configuration in Configuration Mode and load it by connecting to the server component running in the background. You will need to be in Runtime Mode to be able to view the [Diagnostics](#). This will let you view the Event Log as well as the Configuration while the Server is running.

See the Administration Settings (shown below) to view the port setting for connecting the Configuration Mode to the Runtime Mode. You can use this setting to determine if you need to open the port in a fire wall or change it as needed.

You get to the TOP Server Settings by **Right Clicking**

on the Administration Icon at the bottom right of your Desktop and choosing **Settings** from the pop up menu. If you don't see the Administration Icon, go to the desk top Start Menu - All Programs - Software Toolbox - TOP Server 6 - TOP Server 6 Administration. The Administration Icon shown will then appear.

The screenshot shows the 'TOP Server Settings' window with the 'Administration' tab selected. The window has a teal header and a close button. Below the header are five tabs: 'Event Log', 'ProgID Redirect', 'User Manager', 'Configuration API Service', and 'Administration'. The 'Administration' tab is active, showing two sub-sections: 'Connection' and 'Session Management'. The 'Connection' section contains a text box for 'Communicate using port' with the value '32408' and a 'Default' button, and a checkbox for 'Allow runtime to accept remote connections' which is unchecked. The 'Session Management' section contains two spinners: 'Max Concurrent Configuration Connections' set to '10' and 'Idle Session Timeout (s)' set to '60'. At the bottom are buttons for 'OK', 'Cancel', 'Apply', and 'Help'.

Section	Setting	Value
Connection	Communicate using port	32408
	Allow runtime to accept remote connections	<input type="checkbox"/>
Session Management	Max Concurrent Configuration Connections	10
	Idle Session Timeout (s)	60
